EXECUTIVE OVERVIEW

Batch to release for manufacturers.

Zyvor Pharma QMS is Zyvor AI Labs' manufacturing quality system: one spine from batch and eBMR through laboratory and QA to release and recall — with India Schedule M, US FDA and EU GMP market modules. Distinct from retail Zyvora Pharmacy.

84
catalogue entries: 73 modules + 11 AI assistants

18
market / regulatory modules + Schedule M checklist

5
deploy paths (desktop, compose, FluxVM, k3s, Windows)

What it covers

Manufacturing	Batches, recipes, guided eBMR (forced step order, second-person verification of critical steps), executed batch record PDF, IPC, line clearance, cleaning, packaging, retains.
Laboratory	Samples, results, specs, automatic OOS, second-person verify.
Quality	Deviations, CAPA with effectiveness checks, complaints, audits, risk, QA approvals, release checklist, supplier qualification and scorecards.
Traceability	Genealogy, CoA draft, quarantine, recalls.
Markets	APQR / APR / PQR, self-inspection, PV, field alerts, EU QP, serialization, GDP, licences, water, ALCOA+; Revised Schedule M readiness checklist (self-assessment), inspection kit export, GS1 / QR payloads.
Plant ops	Stability, environment, warehouse, documents, training, change control, equipment.
Platform	Approval workflows, saved reports, ERP / LIMS connector framework, offline queue, passkeys, SAML / OIDC SSO, SCIM; several are pilot-flagged and site scoping is partial.

Why organisations evaluate it

One release spine

Manufacturing, lab and QA share the same batch record instead of three spreadsheets.

Market-aware pilot

India, US and EU modules as electronic records — not live gateway filings.

Yours to run

Self-hosted Postgres + Go API. Desktop launchers, compose, FluxVM or k3s; single node, not production-hardened.

Honest by design

Pilot-ready status and non-claims are printed on the product, the site and this sheet.

Live demo. A shared, read-only demo on synthetic data is at pharma.zyvor.dev (details on the Try it page). It may be reset or changed and is not for real data.

Status. Pilot electronic records only. **Not a validated system. Not 21 CFR Part 11 / Annex 11 / WHO certified.** Synthetic or non-regulated demonstration data. Do not use for regulated release without your own validation.
