PILOT GUIDE

Prove the fit in an afternoon.

A short path for plant QA / IT to decide whether Pharma QMS is worth a deeper pilot. Use synthetic data only.

Local only | Mac · Windows · Linux | Synthetic data | Not Part 11

Before you start

- Podman or Docker Desktop (for Postgres), or any Postgres on :5432.
- Or ask us for an evaluation bundle or compose / k3s / FluxVM files. Keep a default instance on your own machine; use strict mode for anything shared.
- Want to look first? The shared read-only live demo (synthetic data) is at pharma.zyvor.dev. It cannot create records.

One-line install (no bundle is published yet)

Mac / Linux

```
curl -fsSL …/get.sh | sh -s -- up
```

Windows PowerShell

```
& ([scriptblock]::Create((irm …/get.ps1))) up
```

What a pilot should prove

1. Health	`/healthz` on the local address (port 8080) returns ok.
2. Catalogue	`/api/v1/features` lists 84 entries (73 modules + 11 AI assistants), a maturity map of pilot / partial entries, and markets india / us / eu / global.
3. Batch path	As `mfg`, create a batch; as `lab`, enter results; as `qa`, approve / release.
4. OOS	Trigger an out-of-spec result and walk the OOS record.
5. Spine depth	Run the guided eBMR in order with second-person verification, print the executed batch record PDF, close a CAPA with an effectiveness check.
6. Markets	Draft an APQR (India) or APR (US) / PQR (EU) stub; work the Revised Schedule M checklist as a self-assessment.
7. Stop	Quit the app or run installer `down`. Data stays under `~/.zyvor-pharma-qms` / your Postgres.

Decision questions

Does the spine match your plant?

Batch → lab → QA without exporting to Excel mid-flight.

Can IT host it?

Compose, FluxVM, k3s or Windows/WSL — pick one path.

What must validation cover?

You own IQ/OQ/PQ. This product is not validated for you.

What integrations matter?

ERP / LIMS connectors are a generic HTTP framework (pilot), not vendor-certified adapters; plan certified integration as a phase-2 ask.

Not a regulated pilot by itself. Contact sales@zyvor.dev for a guided walkthrough. Product source is private; this public site ships no application code.
